Sebastian

Samples:  
[Chem. composition][wire diameter][strain][HT time + temp.]  
Mg-2Ag\_0.92\_0.2\_30s\_425°C

Corrosion experiment:  
[YYYY-MM-DD][Setup][Chem. composition].[suffix]

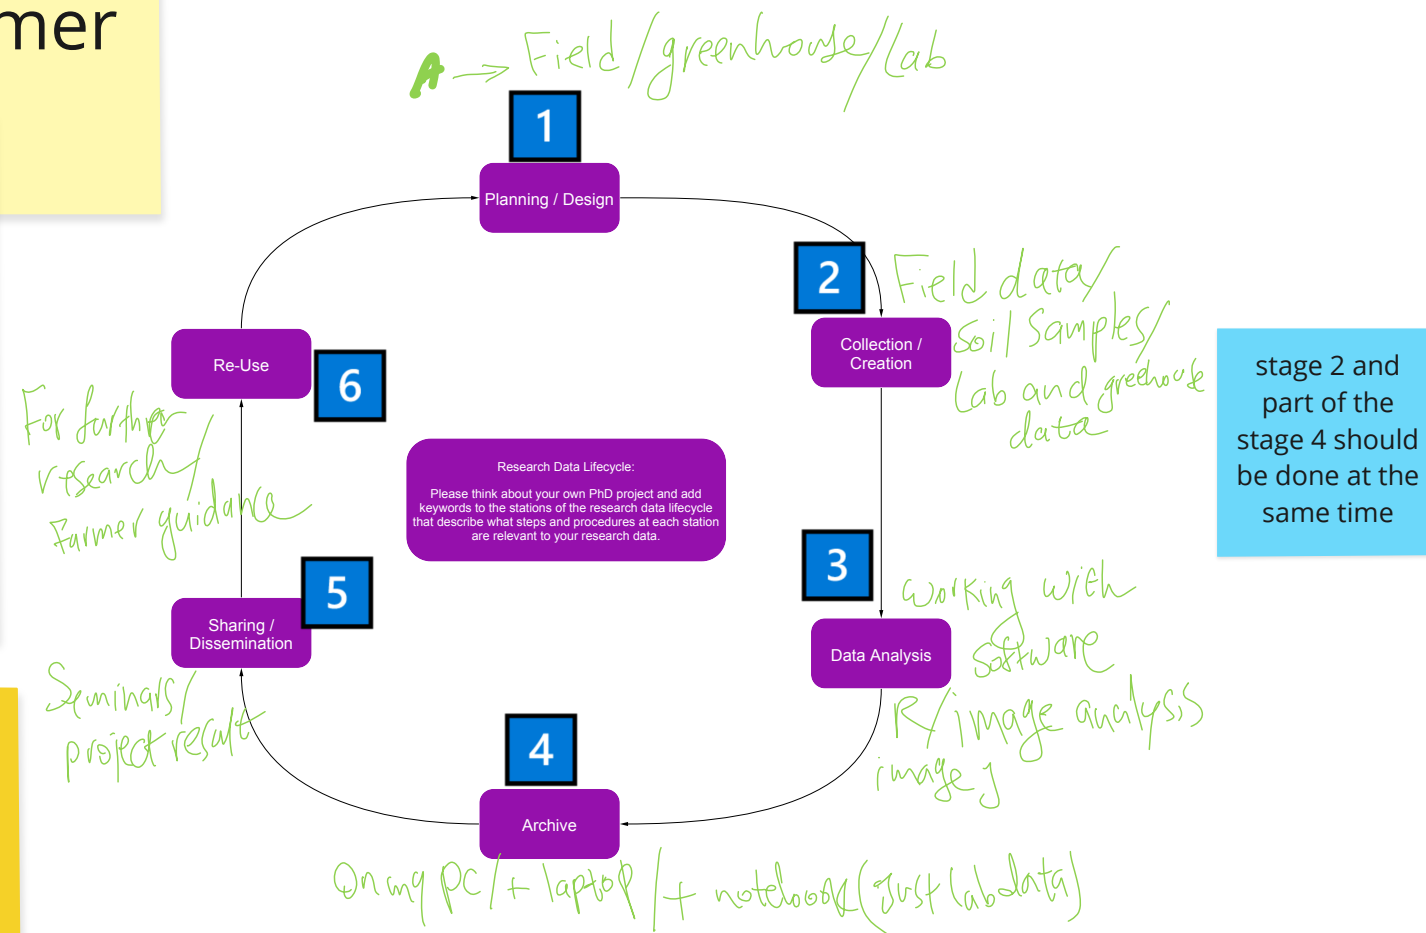

- PhD
  - Raw\_data
  - Mechanical\_test
  - Corrosion\_test
  - Synchrotron
- Publication
  - Conferences
  - Papers

# Sahar Kretschmer

Project main name-(the data from greenhouse or fieldwork or I will add hyperspectral camera data and zymography data )- abbreviation of my name and family name- date (ddmmyyyy). file

Covercrop-greenhouse-SK-20012023.pdf

Covercrop-field-SK-01032023.pdf

Stephanie

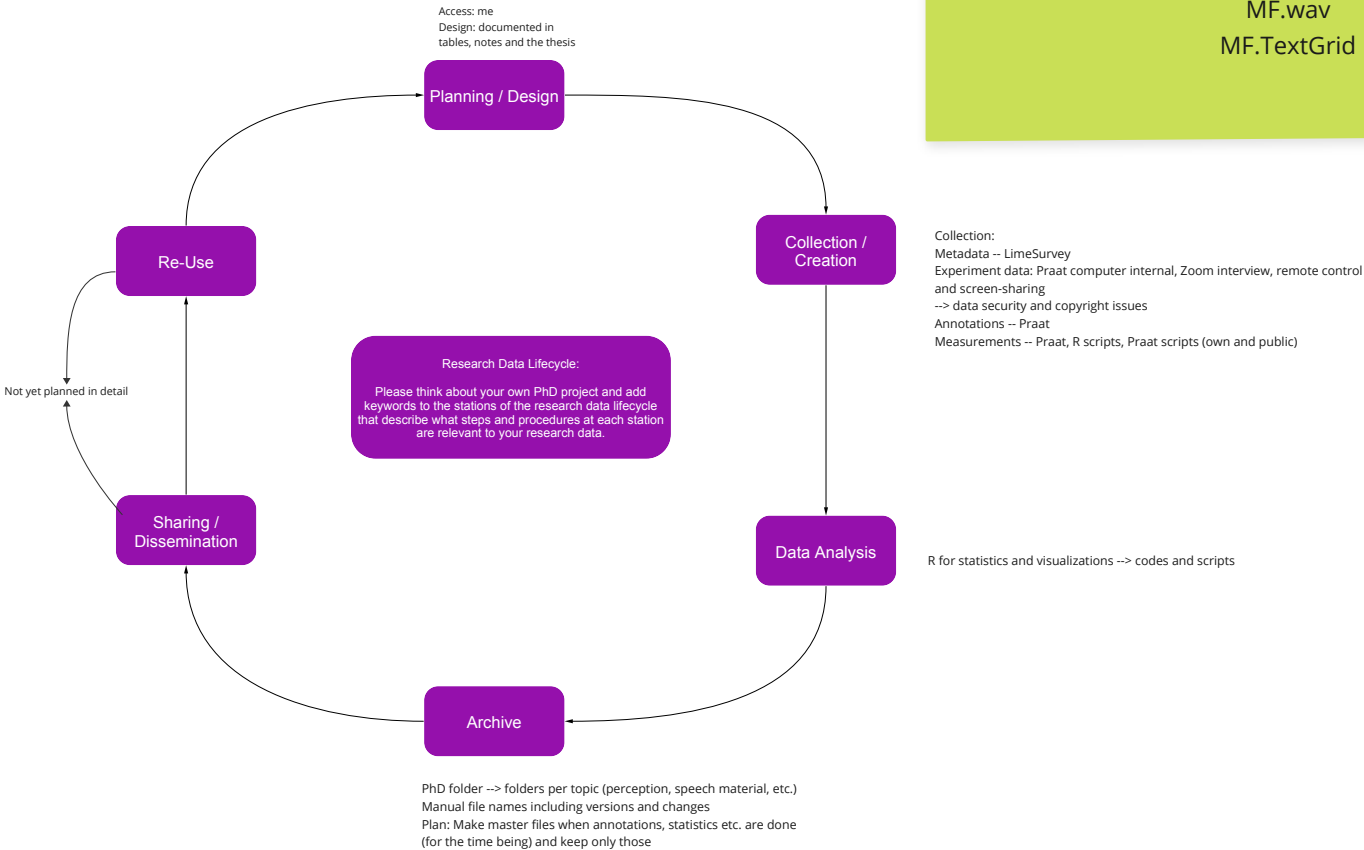

Naming convention

- 1. Folder structure: topics (perception, speech material/annotations, statistics, thesis) with subfolders
- 2. structure applies to audio files, annotations, data

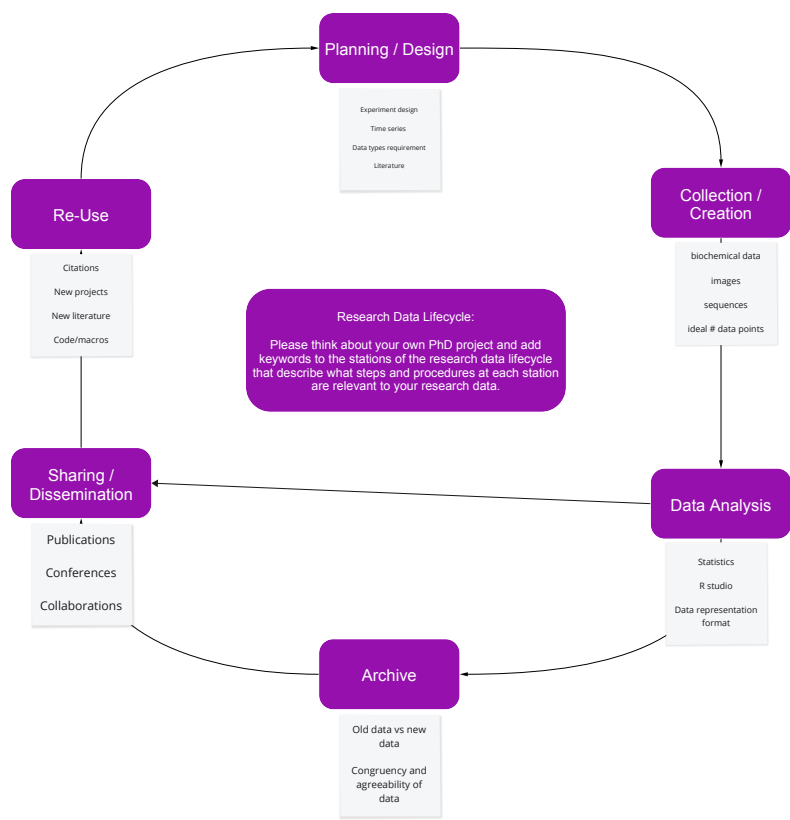

[topic]\_[speaker/participant/all]\_[measurement(if applicable)]\_[date(statistics, results, annotations, chapters)]\_[version(statistics, results, annotations, chapters)].[suffix]

E.g. (for annotation):  
ANN\_MF\_2023-01-26\_3.2.5.TextGrid

In measurement folders:  
MF.wav  
MF.TextGrid

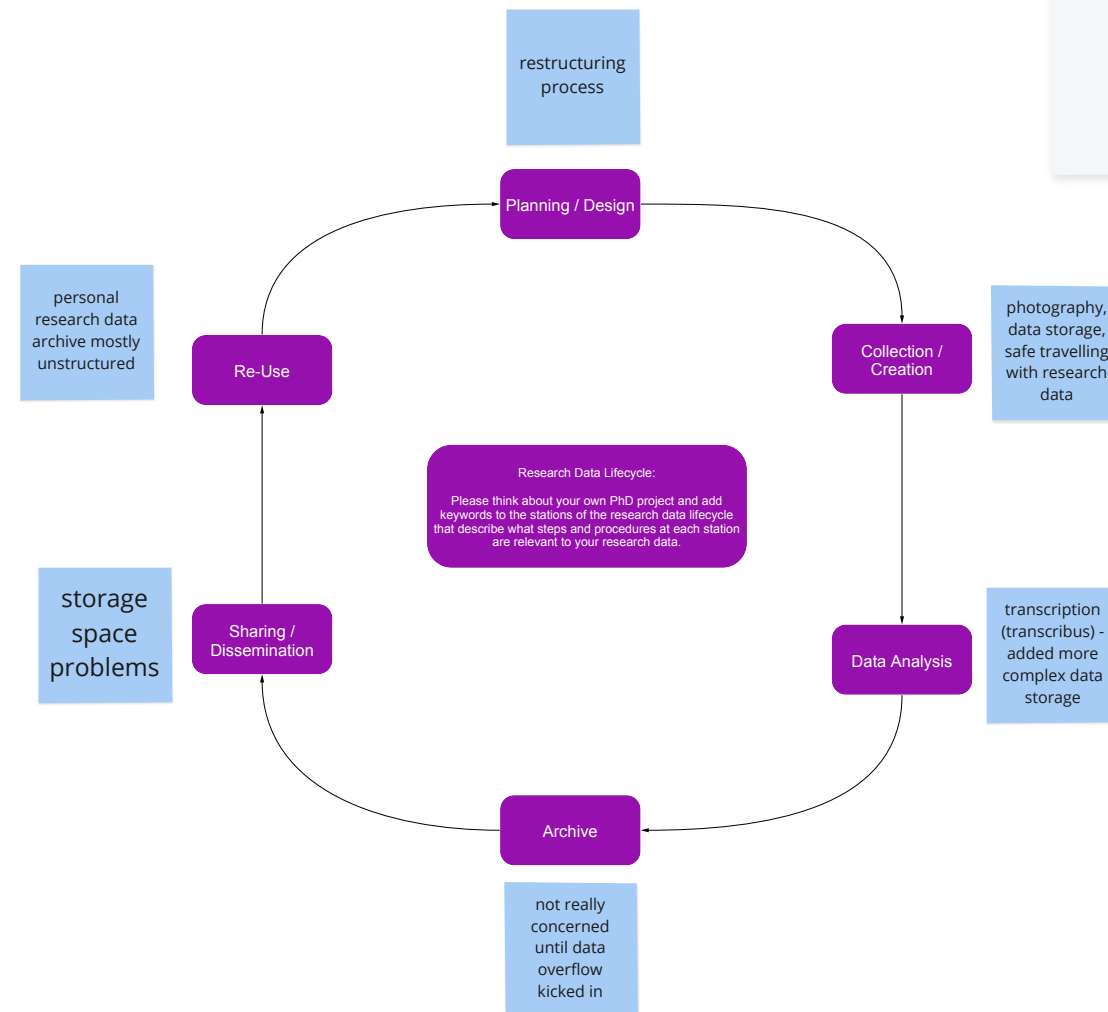

Naming convention

- Nested folders defining experiments
- Experiment with date, experiment conditions eg for images
- Statistics file, in the same folder with the same date and version
  - Thesis
  - Thesis\_Version
  - 0.0.0

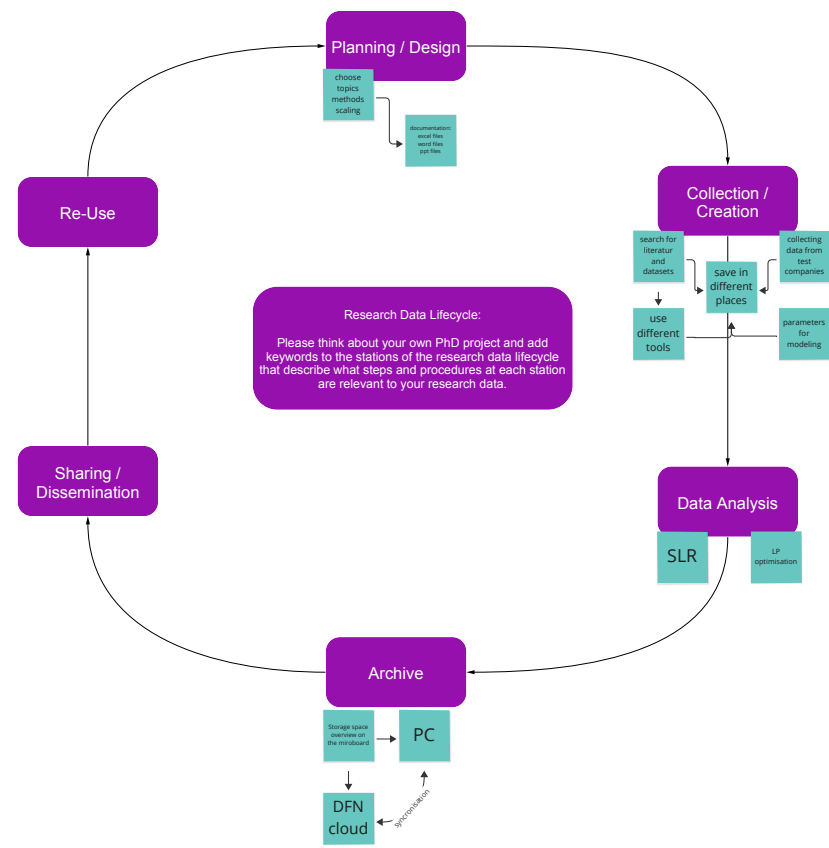

# Per-Ole

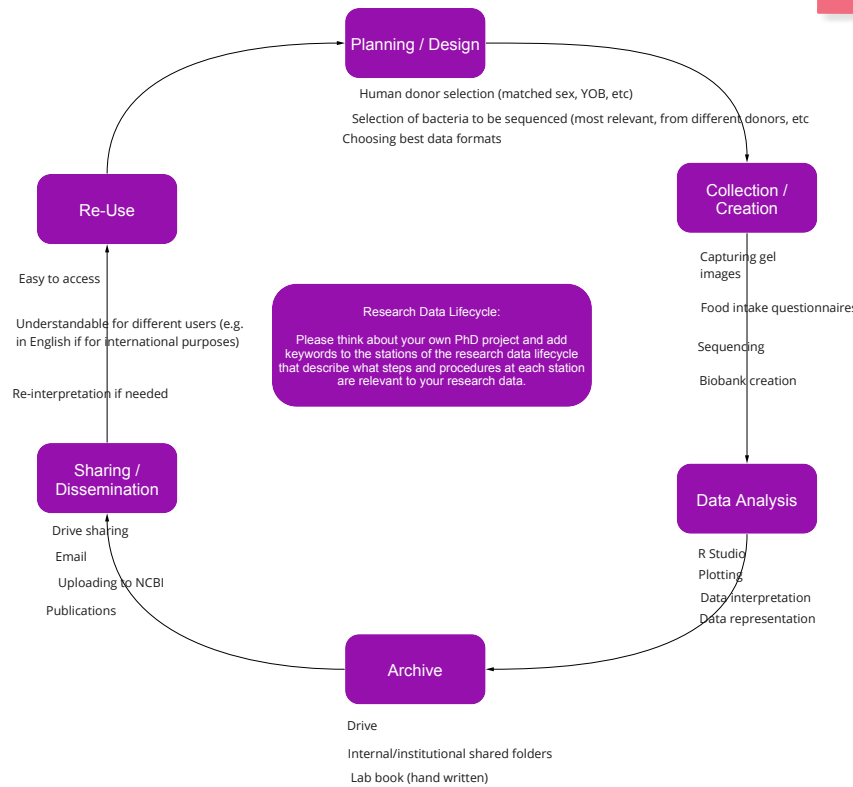

- Folder structure im preparation for the chapters
- Dates diffentiated between historical dates and research date)
  - ...
- original file name (archive Numbers)
  - abrevations needed (must be comprehensible and documented)
  - versions scheme (1.0., 1.2, etc.)

naming convention

Files	.docx .xls .ppt .csv .pdf .jpg .
sketch	
descriptive aspects	Project: Name of the Project in one word Kind: conference, essay, mindmap, koncept, exposee, paper, template, rawdata, documentation
abbreviation	Projects: Diss (PhD stuff in general) Anbauplanung Barrieren
versioning scheme	1.0 Draft 1.1 minor changes 2.0 major change 2.1.1 further major changes
convention	Projekt_Kind_Purpose_Version.suffix

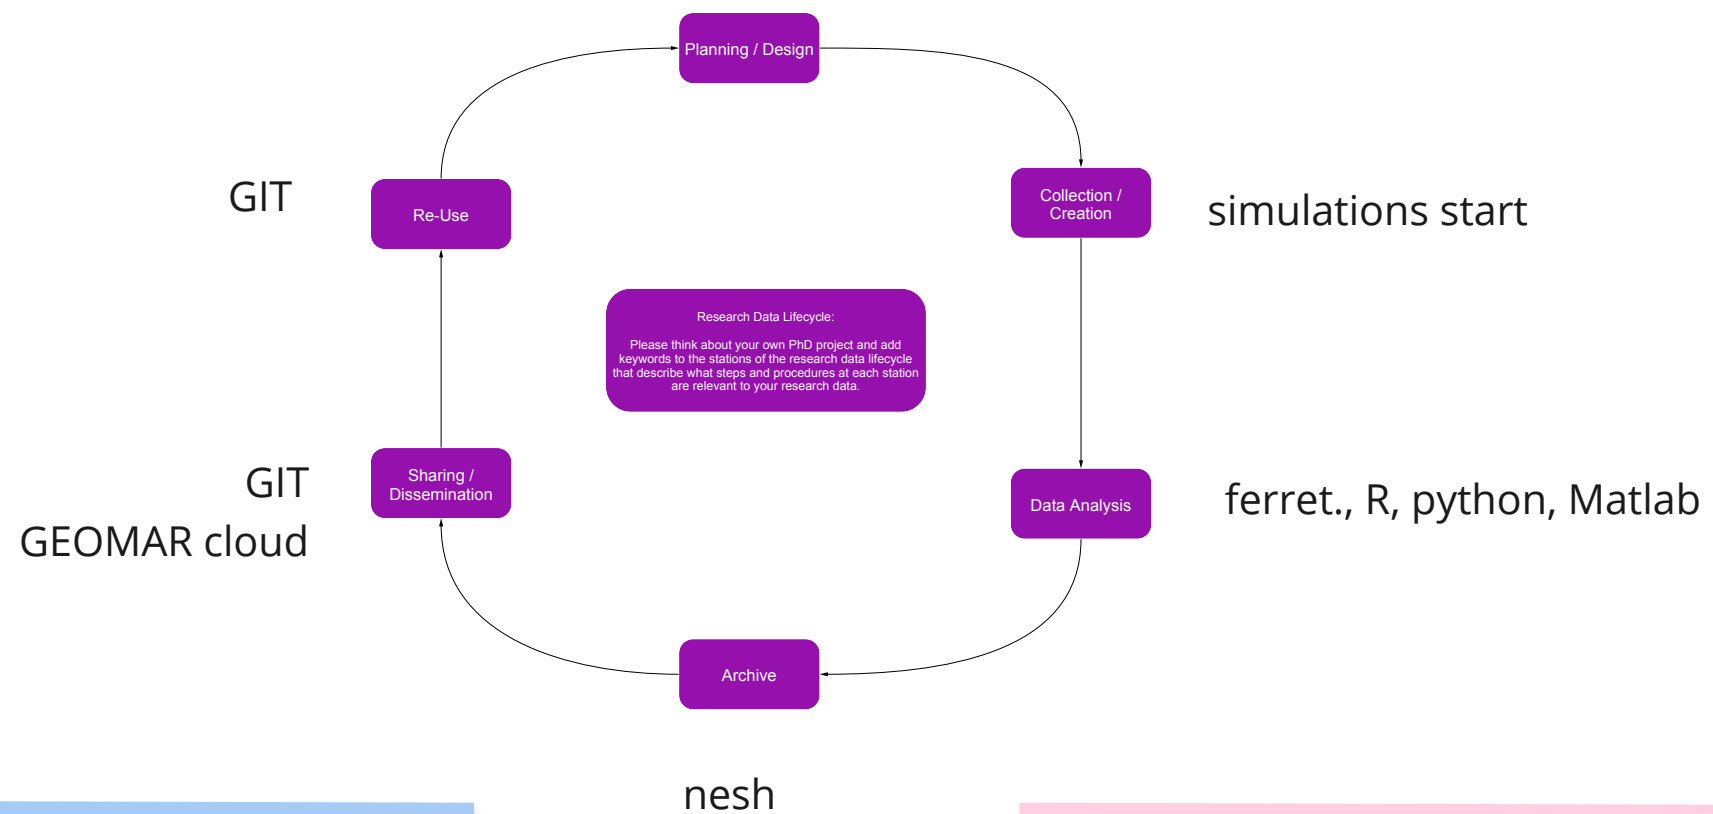

Naming convention:  
1) Sequencing requests  
2) "2023\_Sequencing"  
3) Date, technique, worker  
4) -  
5) "2023-01-26\_Illumina\_Sofia"

Na

observation  
constraints

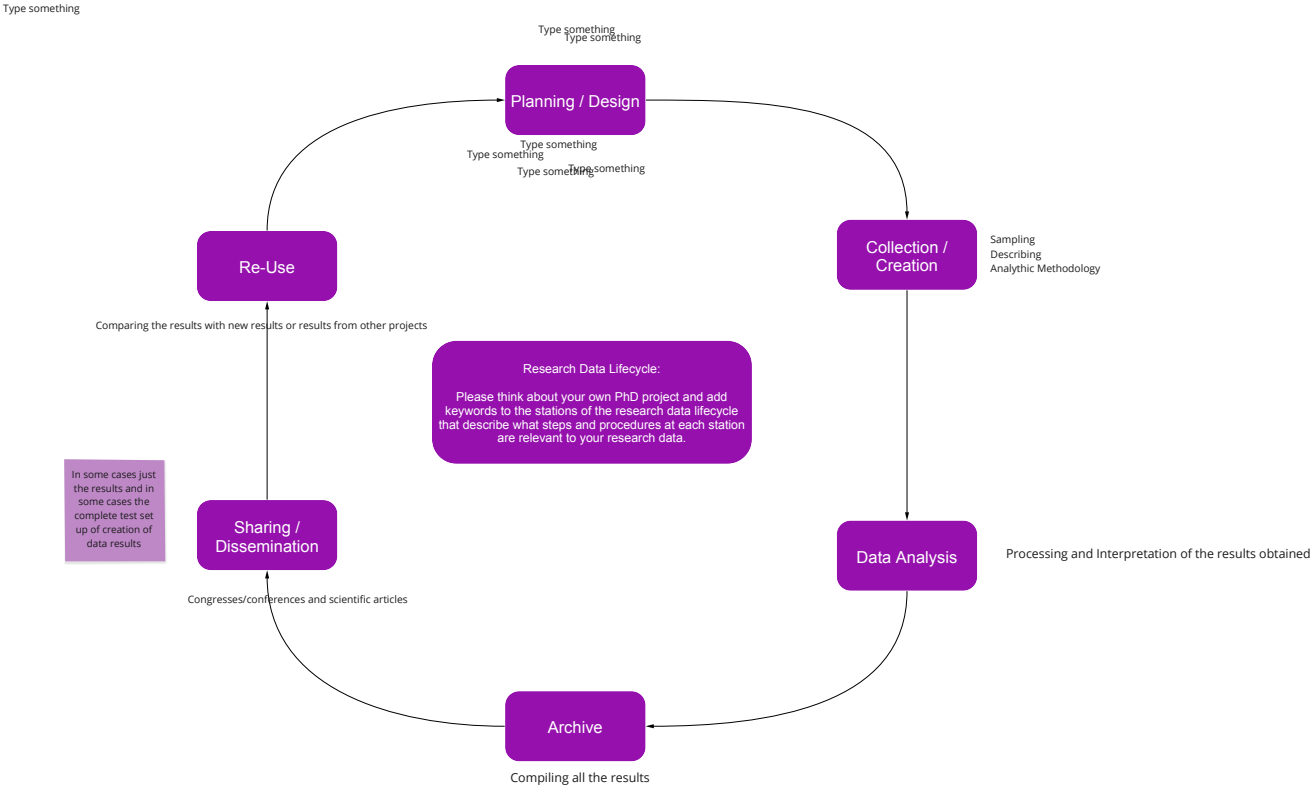

folder structure:  
-> research  
-> project  
-> data;  
scripts;  
reference;  
figs;  
template;  
meetings;  
process (for ongoing unsorted stuff)

naming convention:  
[task]\_[objective]\_[approach]\_[simulation-ID]\_[date].[format-suffix]

# Mafalda

**Naming Convention:**

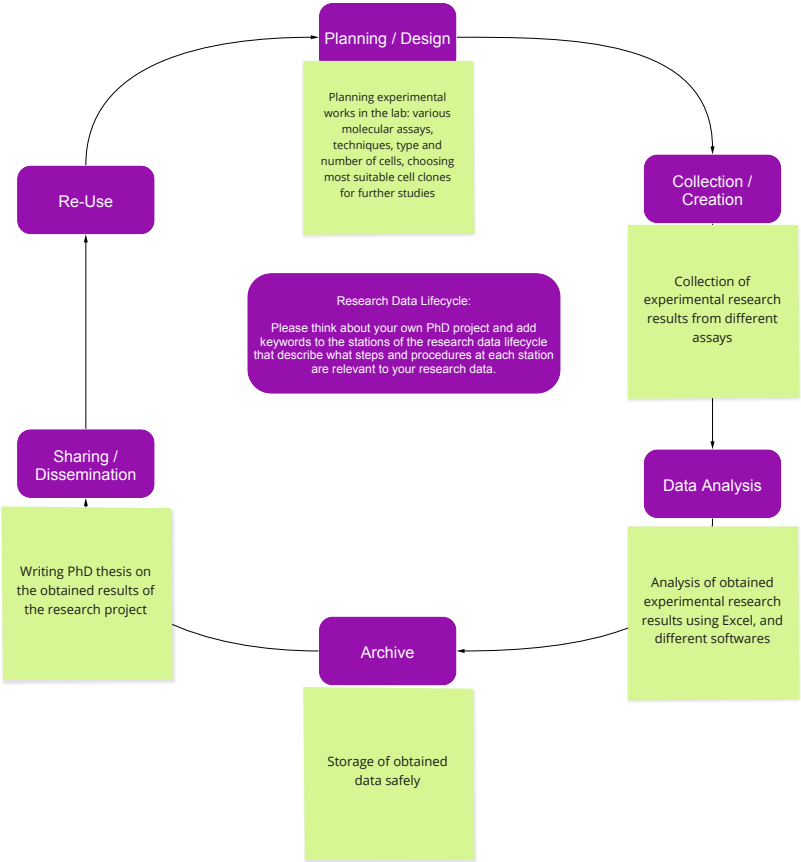

- Results files
  - Folder structure:  
Analythic  
Methodology/Tip  
e-of-  
Analyses/MudVol  
canoName/  
1. Which  
methodology the  
result refers to  
2. Which analytic  
methodology  
was uses  
3.Which Mud  
volcano was  
analysed
  - Abbreviations:  
Ca=Calcium  
Yi= Yinazao mud  
volcano  
MV= Mud  
Volcano
  - Version  
excheme:  
v1, v2....
  - Date format:  
YYYY-MM-DD
  - Example of a file  
name:  
Isotopes\_Ca\_Yi-  
MV\_2022-11\_v1

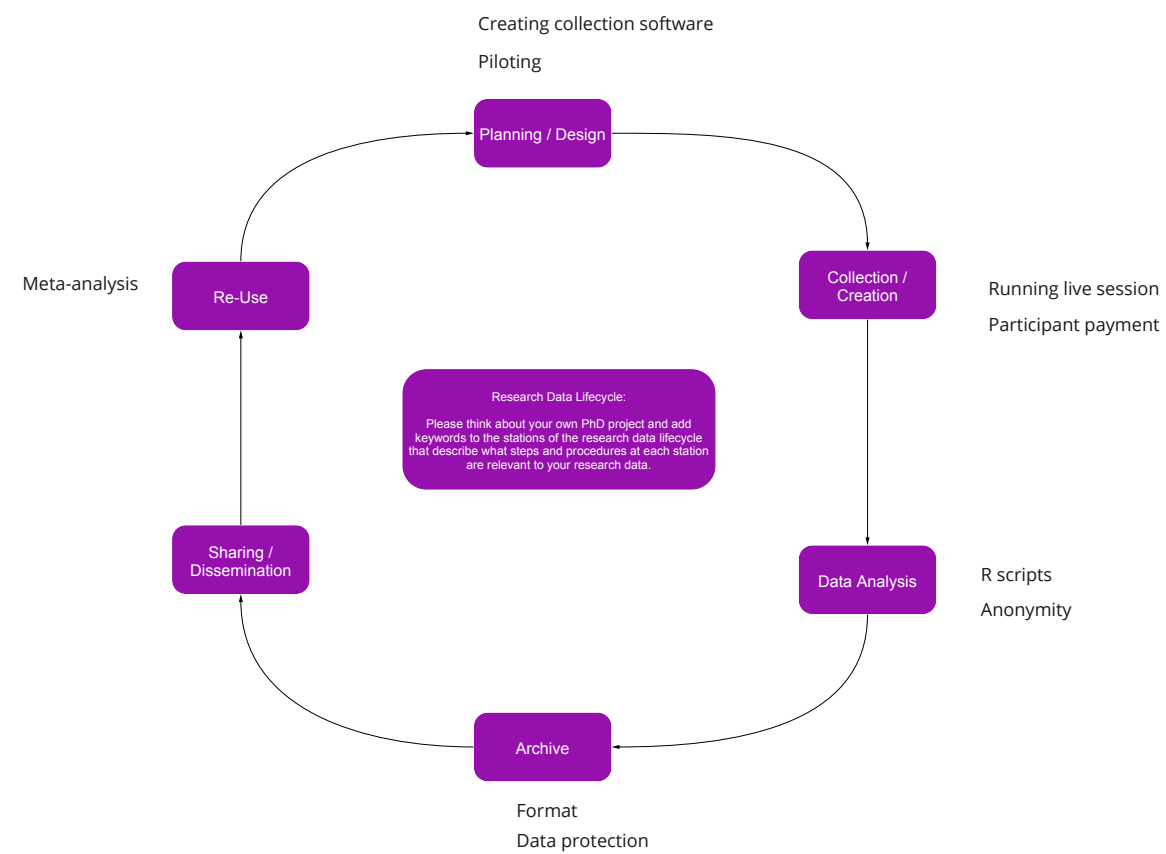

Dinara

- Naming convention:
- 1. Date
  - 2. Name of an experiment
  - 3. Name of a cell clone, a gene or a protein examined / number of a tube

Example: 2023-01-26\_ROS\_P4b9\_1,5,11

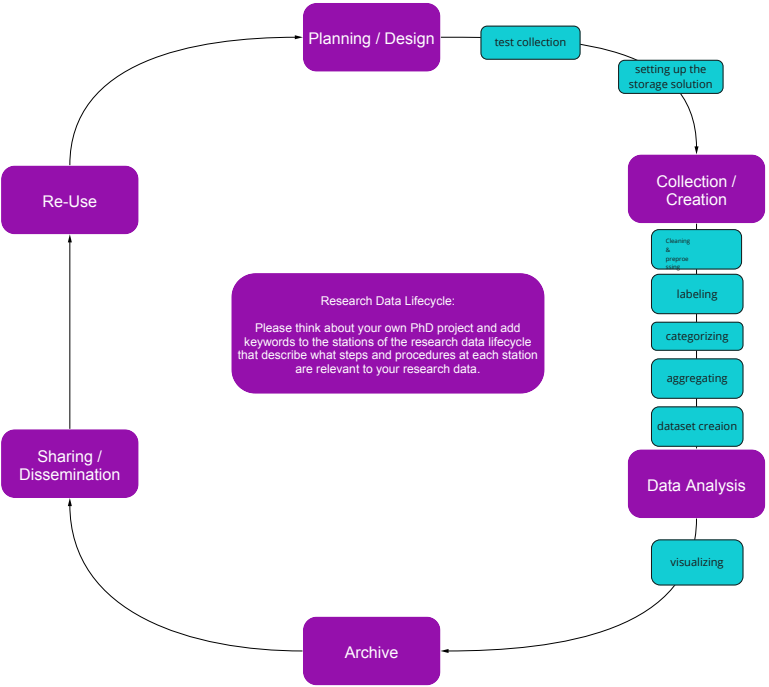

Charlotte

project/collectionstage/game/versions/session  
gamename\_version\_treatment\_sessioncode\_date\_datatype  
I use Git

Anastasia

You are working in a research group working on the ecology of forests and take over data from a previous project: [average\\_d.xlsx](#)

- Speculate what kind of data it could be.

Discuss and take notes

- Apart from the data itself, what information do you need to be able to work with a dataset?
- What do you notice in regard of data quality?

Kind of data:  
measurement  
per january each year  
federal states  
absolut? or percentages

further information needed:  
units  
clarification about missing data  
measurement methods (east/west  
germany)  
documentation as a textfile  
why grouping federal states?

data quality:  
unequal  
decimals

You are working in a research group working on the ecology of forests and take over data from a previous project: [average\\_d.xlsx](#)

- Speculate what kind of data it could be.

Discuss and take notes

- Apart from the data itself, what information do you need to be able to work with a dataset?
- What do you notice in regard of data quality?

1/1948	1.11	1.11	0.1	0.1	1.11	1.11	1.11
1/1949	1.11	1.11	0.1	0.1	1.11	1.11	1.11
1/1950	1.11	1.11	0.1	0.1	1.11	1.11	1.11

What is shown:

- probably German states in columns
- + an average across columns
- Rows probably January of each year

Data quality issues

- differing notations for missing data (nothing, na, n.a., ka, k.a.)
- unit missing
- shortened numbers to two decimal spaces
- row labelling
- column labelling

You are working in a research group working on the ecology of forests and take over data from a previous project: [average\\_d.xlsx](#)

- Speculate what kind of data it could be.
  - Annual average of ...

Discuss and take notes

- Apart from the data itself, what information do you need to be able to work with a dataset?
  - Abbreviations
  - Units of measurements
- What do you notice in regard of data quality?
  - Missing values named differently / blank
  - No data unit
  - Excel
  - Abbreviations are spaced differently (comma or slash)

#### Partner work:

Collect all file formats you are working with and post them to the miro-Board.  
Give some explanation on your file formats to your partner.  
What kind of data hides behind the format?  
What kind of software is needed to read it?  
Anything special to consider?

.csv/.xlsx  
.tif/.czi  
.cm5  
.docx/.pdf/.pptx  
.py/.R/  
.fasta/.nex/.treefile  
etc (phylogenetics)

.txt / .tex / .docx  
.csv /.xlsx  
.img/.png/.tif
